Mohammed Thajul Akber

SOC Analyst · Penetration Tester

Lakshadweep, India github.com/HoodyK5 linkedin.com/in/thajulakber

SUMMARY

Cybersecurity student aiming for SOC Analyst and Penetration Tester roles. I build detection and malware-analysis tooling in my own lab: a Wazuh SIEM with file integrity monitoring and automated response, and a Python desktop tool that enriches files, hashes and URLs from four threat-intelligence sources. One-month ShadowFox internship and certificates in AI security, LLM security, networking and cloud attack paths.

EXPERIENCE

Cybersecurity Intern, ShadowFox — 1 month

Practical assessment in authorised lab environments. Each task submitted as a written report with objective, tools, methodology, evidence, findings, risk assessment and remediation.

- Port and service identification and web directory enumeration on an authorised test target, with HTTP response codes and risk assessment.
- Wireshark analysis of login traffic to show whether credentials travel in plaintext or encrypted.
- VeraCrypt container analysis (identifying an encoding versus a password hash, password recovery) and PE header analysis to record a Windows executable's entry-point address in PE Explorer.
- Metasploit payload and reverse-shell lab in an isolated Windows 10 VM, observed with network and endpoint monitoring, with defensive recommendations.
- Wi-Fi security assessment of a network I own: handshakes, password strength and remediation.
- Advanced penetration test with a professional report: scope, methodology, evidence, risk ratings and remediation plan.

PROJECTS

CID Malware Intelligence Tool — Python · Tkinter · github.com/HoodyK5

- SOC-style desktop app for malware analysis, grown from v3.1 through v3.2 to v4.
- Integrates VirusTotal, Criminal IP, URLScan.io and Hybrid Analysis.
- Modules: IOC extraction, YARA scanning, APK analysis, passive OSINT, SQLite hash cache, file quarantine, network monitoring, real-time alerts, PDF and CSV export.
- API keys load from an environment file, so no secrets are stored in the repository.

Wazuh SOC Home Lab — Wazuh · Docker · VirtualBox

- Wazuh SIEM in Docker on Windows 11 monitoring an Ubuntu Server agent, with a Kali Linux VM as the attacker.
- Configured File Integrity Monitoring, VirusTotal integration for malware verdicts and Active Response scripts for automated threat removal.
- Mapped detections to MITRE ATT&CK and wrote implementation and interview-prep reference guides.

CERTIFICATIONS

Certified LLM Security Expert (CLLMSE) — Sep 2026
Red Team Leaders · exam passed

Introduction to AI Security — Oct 2026
AISEC University · 2 training hours

Introduction to Cybersecurity — Oct 2026
Cisco Networking Academy · certificate and student-level credential

Networking Devices and Initial Configuration — Oct 2026
Cisco Networking Academy

Cloud Attack Paths — Sep 2026
Redspector · workshop, certificate of participation

The Haunted Network CTF — Oct 2025
Techbyheart · certificate of achievement

SKILLS

Detection: Wazuh, Splunk, MITRE ATT&CK, File Integrity Monitoring, Active Response

Offensive: Kali Linux, Metasploit, Burp Suite, Nmap, directory enumeration, reverse-shell labs

Analysis: Wireshark, PE Explorer, VeraCrypt, YARA, IOC extraction

Threat intelligence: VirusTotal, URLScan.io, Hybrid Analysis, Criminal IP

AI and cloud security: LLM security, AI security, cloud attack paths

Build and lab: Python, Tkinter, SQLite, Git, Docker, VirtualBox, Ubuntu Server, Windows 11, TryHackMe

Reporting: technical report writing, risk rating, remediation planning
